

# Screen Scrape Task

## Outline

Create a composer based PHP script that scrapes <http://www.unite-students.com/liverpool> and gathers the Property names, room types in each property and minimum price for each room type.

## Output

The script should output a CSV with **at a minimum** the following fields

Field	Description
Property Name	The name of the property e.g. Larch House
Room Type	The room type e.g. Basic En-suite
Starting price	The price that the room type starts from e.g. £99

## Rules

- Your project must be composer based
- You can use any readily available composer bundle to aid you
- The project must be completed and returned by email within 24hrs of receiving
- Creative thinking & going the extra mile is encouraged! For example you could add a switch to your command line script to output in other formats such as JSON.
- Your project should include a README in Markdown format explaining your technology choices and approach.
